Industry Overview

Sn-2 palmitate is a triglyceride with palmitic acid bonded to a glycerol backbone and is synthesized by enzymatic processes on vegetable oils. These are used as human milk fat substitutes and used mainly in infant formulas. Used in cases where the baby might be in need of additional nutritional support, these are marketed as milk powders that are specifically made for infants. While the use for these products mainly arises from medical conditions and dietetic supplement needs, Sn-2 milk powder is also used for general purposes in order to provide a holistic nutrition plan for babies.
