Description

A wire is a single, usually cylindrical, flexible strand or rod of metal. Wires are used to bear mechanical loads or electricity and telecommunications signals. Wire is commonly formed by drawing the metal through a hole in a die or draw plate. Wire gauges come in various standard sizes, as expressed in terms of a gauge number. The term wire is also used more loosely to refer to a bundle of such strands, as in "multistranded wire", which is more correctly termed a wire rope in mechanics, or a cable in electricity.

On the basis vehicle type, the global [automotive wire](#) market can be divided into three segments: conventional fuel vehicle, hybrid vehicle and electric vehicle. Among them, conventional fuel vehicle accounted for about 74% of the market and is projected to observe a CAGR of 18.34% from 2017 to 2025.

The global Automotive Wires market was valued at 11400 million US\$ in 2018 and will reach 17200 million US\$ by the end of 2025, growing at a CAGR of 5.3% during 2019-2025.
