Description

Glass fibers are the materials consisting of extremely fine glass fibers, used in making various products, such as yarns, fabrics, insulators, and structural objects or parts. It is also called spun glass.

Glass fiber & glass fiber reinforced plastic (GFRP) composites refer to composite materials made of resin reinforced with glass fiber. GFRP composites is used for its high mechanical strength, light weight, corrosion and temperature resistant properties, thermal insulation, smooth internal surface, easy to form complex shapes, ease of repair and its cost effectiveness.

Ore powder material and Chemical raw materials are the main raw materials for the production of glass fibers. With the development of glass fibers industry, raw materials' manufacturers are also benefited from the glass fibers industry in some extent.

This industry is affected by the policy, so it's important to put an eye on different countries policy.

We tend to believe this industry now is mature, and the consumption increasing degree will show a slowly rising curve. On product prices, the slow downward trend in recent years will maintain in the future, as competition intensifies. Besides, prices gap between different brands will go narrowing gradually. Also, there will be fluctuation in gross margin.

The global Glass Fiber Reinforced Plastics (GFRP) Composites market was valued at 7150 million US\$ in 2018 and will reach 9230 million US\$ by the end of 2025, growing at a CAGR of 3.3% during 2019-2025.
