## Description

Non-metallic mineral reserves consist of stone quarries and clay and sand pits; chemical and fertiliser mineral deposits; salt deposits; deposits of quartz, gypsum, natural gem stones, asphalt and bitumen, peat and other non-metallic minerals other than coal and petroleum.

Manufacturers of ceramic tiles are incorporating advanced technologies such as 3D printing, anti-microbial glaze, nanotechnology, and water jet technology. Digital printing technology not only helps in enhancing the color of tiles but also reproduces the finish of marble, granite, and wood. Anti-microbial glazed tiles are also gaining traction in the market, especially in the residential, healthcare, and hospitality sectors. This new-age technology is infused during the manufacturing process of the tiles and helps in curbing bacterial growth on the surface of the tiles.
