PUNE, MAHARASHTRA, INDIA, December 18, 2019 /EINPresswire.com/ -- [Non-GMO Foods Industry](#)

Description

Non-GMO means non-genetically modified organisms. GMOs (genetically modified organisms), are novel organisms created in a laboratory using genetic modification/engineering techniques. Scientists and consumer and environmental groups have cited many health and environmental risks with foods containing GMOs.

Recent years, more and more people realize that genetically modified foods have much more risk. One of the main problems with genetic engineering is that the process of inserting genes into the DNA of a food plant is random; scientists have no idea where the genes go. This can disrupt the functioning of other genes and create novel proteins that have never been in the food supply and could create toxins and allergens in foods.

Moreover, the government start emphasizing the Non-GMO food is more healthy for public. This will drive the non-GMO food market growing fast.
