The global orthopedic accessories market was valued at about \$1.8 billion in 2018 and is expected to grow to \$1.9 billion at a CAGR of 1.4% through 2022. The increase in the number of medical cases due to road and sports accidents is driving the orthopaedic accessories market. The

probability of bones and other muscle tissues getting ruptured is high in road and sports accidents, thus requiring orthopaedic accessories like arm support, knee braces and hip support for providing rigid support to the ruptured tissue and broken joint/bones during the treatment. Orthopaedic accessories immobilize the bones and give them time to heal. Also, orthopaedic accessories like bone cement and casting help in joining broken bones and filling in the void present in or between the bones.

The orthopedic accessories devices (or) equipment market consists of sales of orthopedic accessories and related services. Orthopedic accessories are used to fix or remove implants from the body. Some of the key products included in this market are bone cements, casting materials, and removal systems.
