Description

The Global Robotic Drilling market is accounted for \$612.3 million in 2017 and is expected to reach \$1341.8 million by 2026 growing at a CAGR of 9.1%. Raised adoption of automation in oil & gas industry and enhanced operational efficiency and less human intervention are some of the factors boosting the market growth. However, the lack of interoperability of rig control systems is restraining the market growth.

Based on application, onshore segment is expected to witness huge growth rate due to the oil and gas production takes place at onshore oil and gas fields. These fields need less capital investment in contrast with offshore fields and the costs related to automation in these fields are relatively low. By installation, retrofit segment is attributed the large market share due to the rising need to improve safety and efficiency of the existing rigs, coupled with the improved focus on low human intervention during drilling.

By geography, North America is likely to be the largest and fastest-growing market during the forecast period owing to the raised shale gas production and quicker adoption of advanced technologies in drilling drive the market growth in the region.
