Global mitigation banking market expected to reach a value of around USD 16,643 million by 2027, at a CAGR of around 13.47% between 2019 and 2027.

NEW YORK, UNITED STATES, January 22, 2020 /EINPresswire.com/ -- Facts and Factors Market Research has published a new report titled "[Mitigation Banking Market](#) By Type (Wetland or Stream Banks, Forest Conservation, and Conservation Banks) and By Verticals (Construction & Mining, Transportation, Energy & Utilities, Healthcare, and Manufacturing): Global Industry Perspective, Comprehensive Analysis, and Forecast, 2018 – 2027". According to the report, the global mitigation banking market was valued at approximately USD 5,463 million in 2018 and is expected to reach a value of around USD 16,643 million by 2027, at a CAGR of around 13.47% between 2019 and 2027.

Mitigation Banking Market

Mitigation banking is the system of debits & credits developed to assure that the environmental damage to streams & wetlands caused due to development works is compensated through preserving & restoring of wetlands, streams, and natural habitats. The mitigate banking helps in minimizing the severity of the damage inflicted upon the environment. Moreover, National Mitigation Banking Association defines mitigation banking as the process of restoring, creating, improving, or preserving the wetland and stream or any other habitat with an aim to compensate for non-preventive resource losses caused as a result of development activities.

Lucrative need for protecting biodiversity will propel the market trends

Growing government concerns pertaining to protecting biodiversity is projected to steer the

growth of the mitigation banking industry over the forecast period. Moreover, the provision of political, social, financial, and ecological safeguards help in improving the negotiating power as well as earning potential of the country. This, in turn, helps in attracting huge foreign investments and also plays a key role in maintaining the biodiversity of the country.

Moreover, mitigation banking helps in preserving the diversity of nature. It helps in offsetting the negative effect of growing industrialization on wetlands, natural habitats, and streams to a larger extent. Apart from this, the economies of scale and technological expertise of mitigation banking enhances its efficacy in terms of cost as well as the quality of restored acreage. Nonetheless, potential investors lack access to data pertaining to wetland credit costs and hence avoid investing in the market. This aspect is likely to depreciate the growth of the market during the forecast period.

Wetland or Stream Banks to dominate the type segment

The growth of the wetland or stream banks segment is credited to the government policy of encouraging of setting up more such mitigation banks. This will help regulatory authorities of the state to ensure buying of wetland credits by developers in order to measure functional & type values of affected wetlands more accurately.

Construction & mining segment to contribute immensely towards the overall market growth

The construction & mining segment is set to accrue revenue worth nearly USD 6,200 million by 2027. The expansion of the segment is attributed to large-scale use of mitigation banking system in the construction & mining industry.

North America to lead the overall regional market growth by 2027

The mitigation banking market in North America is set to register the highest CAGR of about 14.88% during the forecast period. The regional market is also likely to accrue enormous gains in terms of revenue during the forecast timeframe. The growth of the market in the region is due to the massive demand for the mitigation banking technology in countries like the U.S.
