

# Local Health Departments Urge Adoption of Funding to Strengthen Public Health Capacity to Respond to Coronavirus Spread

*Millions in uncovered costs already incurred as health departments prepare for and respond to potential and confirmed cases*

WASHINGTON, DC, UNITED STATES, March 2, 2020 /EINPresswire.com/ -- The [National Association of County and City Health Officials](#) (NACCHO), on behalf of the nation's 3,000 local health departments, sent the following letter to Congress urging it to quickly pass a robust emergency supplemental funding that includes specific resources to support the work of public health departments to activate for and respond to the coronavirus. A full copy of the letter, include an extensive list of activities and supplies that need funding) can be found [here](#).

The National Association of County and City Health Officials (NACCHO) urges Congress to quickly adopt efforts to support and strengthen local, state, federal, territorial, tribal, and global public health capacity and coordination to adequately respond to this infectious disease outbreak.

A wide range of potential funding amounts have been suggested in recent days by both the Administration and Members of Congress. While it is difficult to accurately predict the future cost of response efforts due to many unknowns about the future scale and spread of the outbreak in the United States, local health departments are already activated and incurring costs related to their work to address potential and future cases in their communities. Therefore, we strongly recommend a robust emergency supplemental package that specifically delineates strong funding to support the work that local, state, tribal and territorial health departments have and continue to do as part of this response. Funds are needed to support a wide range of activities, including, but not limited to:

- Isolation/quarantine related activities, including securing and standing up facilities, transportation and lodging and wrap around services like behavioral health services/support, counseling, or even necessities like food, toiletries, etc.
- Testing and monitoring patients that are currently under investigation (PUIs), rapidly

investigating cases, and obtaining information on their close contacts.

- Outreach to the general public, including media buys for public communication, collaboration with community organizations, printing, phone banks, updating web information, and translating materials into appropriate languages.
- Engagement with hospital, healthcare system, and health plan leaders to monitor healthcare staffing and supplies; implement plans to reduce demands on the healthcare system.
- Acquisition of personal protective equipment (PPE), and other equipment like thermometers.
- Laboratory testing equipment, supplies, and support personnel.
- Data analytics and epidemiological surveillance system capacity.
- Implementing seamless, interoperable data sharing across the public health infrastructure.

In addition, we request that emergency supplemental appropriations provide funding to reimburse costs that were redirected from other programs, consistent with the structure of past emergency supplemental appropriations. Lastly, funding should not be offset by cutting other public health or human service programs, and any existing programs or grants from which funds are diverted or transferred in the near-term response should be replenished by the emergency supplemental appropriation.

While supplemental funding will support critical activities to rapidly respond to the COVID-19 outbreak, it does not preclude the need for Congress to provide sustained, continued, and increased investments through the annual appropriations process for HHS to expand capacity to address other existing and future public health threats. Strong, sustainable funding is critical to increase the capacity of health departments who have lost nearly a quarter of their workforce since 2008.

NACCHO and local health departments look forward to working with Congress to address this global outbreak that has the potential to spread throughout our communities, disrupting families, workplaces, and the U.S. economy. Without medical countermeasures, our most effective prevention efforts to minimize widespread illness and loss of life include community mitigation activities that require intensive work by trained public health professionals. Any delay in these efforts can result in a huge human and economic cost.
