

Exclusive Allergan speaker interview released for Pre-Filled Syringes West Coast conference 2020

SMi reports: SMi Group interviews James Wabby from Allergan for Pre-Filled Syringes West Coast 2020

SAN DIEGO, CA, UNITED STATES, March 23, 2020 /EINPresswire.com/ -- The 5th annual [Pre-Filled Syringes West Coast](#) conference will reconvene on the 15th - 16th June in San Diego, CA. As the event draws closer the agenda will offer a variety of key topics surrounding all areas within the Pre-filled syringes field. Crucial topics will be explored by high profile speakers in attendance, where they will discuss updates such as: the latest news with regulatory guidance from industry experts and regulatory bodies, case studies on device design and complex formulation, life cycle and control strategies, and innovations in connectivity and digital health and many more.

Over the two-day event, delegates will have the chance to meet and network with Global Product Managers, Senior PFS Engineers, Device Testing Managers, Heads of Late-Stage PFS Development and many more.

An early bird saving of \$200 will be available for bookings made by March 31st 2020. Register at www.prefilled-syringes-westcoast.com/einpr4

On the run up to the conference, SMi is pleased to catch up with James Wabby, Executive Director Regulatory Affairs Devices & Combination Products, Allergan to discuss his views and insight on the Pre-filled Syringes market, his presentation details and more.

Snapshot of James' interview:

The Pre-Filled Syringes market has matured greatly over recent years, what key differences have you noticed in the last year regarding significant developments?

"There is no question that the industry is developing more sophisticated drug delivery platforms. Historically, the industry started with the classic pre-filled syringe and there has been significant developments in the space of patient centric single chamber, dual chamber and multi-chamber pre-filled syringes. One main reason for the various development efforts is to support personalized complex therapies. In addition, there is a growing need for customized injection

systems to support the increase of specific therapeutic applications, such as the global dermal filler market. Administering dermal fillers and botulinum toxin therapies involves multiple injections of finite low-volume boluses into multiple target sites”.

What do you see as the greatest challenge for you to overcome personally in the pre-filled syringes field at the moment?

“The greatest opportunity within the pre-filled syringe industry is working cross functionally with medical device, pharmaceutical and biologic experts. This is a great experience which involves a ton of knowledge sharing across the team of experts. While there are similarities there are also many differences in the development of various therapeutic applications”.

There will also be a post-conference workshop day on the 17th of June 2020 featuring two half-day workshops.

The event brochure with the full interview, agenda and speaker line-up is available to download from the website: www.prefilled-syringes-westcoast.com/einpr4
