UBX Cloud and WaTech Partner to Help Businesses Transition to Telework

UBX Cloud has partnered with WaTech to provide IT and phone systems relief to the many businesses affected by the COVID-19 outbreak.

DETROIT, UNITED STATES, March 23, 2020 /EINPresswire.com/ -- UBX Cloud, the global cloud services provider based out of metro Detroit, has partnered with WaTech, the metro Detroit based telecommunications and managed IT services provider, to provide IT and phone systems relief to the many businesses affected by the COVID-19 outbreak.

UBX Cloud is offering free emergency migrations to all of their MSP partners, as they are experiencing an uptick in demand for cloud solutions to facilitate remote work. With businesses now facing financial uncertainty, UBX Cloud is migrating their client workloads into their cloud and/or building out virtualized desktop environments at no charge, along with 45 days of free service.

UBX Cloud regularly tests failover, data integrity and redundant physical infrastructure as part of their business continuity and disaster recovery program. All services are monitored to ensure they meet their service-level agreement (SLA). UBX Cloud is augmenting products and services where excess capacity exists to avoid disruptions. Maintaining open channels with upstream network providers effectively manages any potential congestion on the networks.

WaTech is offering reduced rates on its FCC-registered hosted PBX solution, Alpha Voice, with expedited deployments to help facilitate the sudden spike in demand for remote work technologies. In addition, WaTech can provide immediate call forwarding to its geographically distributed Alpha Voice servers to relieve overburdened call center systems. Together the companies can provide a complete, scalable telework solution for organizations impacted by the coronavirus pandemic.

For more information, please refer to the contact information below and reach out directly to UBX Cloud or WaTech.
