

# Byzen Digital Inc Announces LOI With Clean Seas

*Byzen Digital Announces LOI with Clean-Seas to Create World's Leading Plastic Recycling Company New Waste to Energy Technologies*

LONDON, UNITED KINGDOM, March 27, 2020 /EINPresswire.com/ -- New Waste to Energy Technologies Improve Process and Efficiency

Byzen Digital Inc. [OTC PINK: BYZN] today announced it has entered into a letter of intent to merge with Clean-Seas, a Delaware corporation, to address the world's growing waste plastic crisis. Byzen will cease operations as a digital holding company and Clean-Seas will take over the Byzen operations allowing the combined company to focus on the global waste plastic crisis.

Waste plastic affects every country and all major corporations that use plastics in their production or packaging of products. It has been said that by 2050 there will be more plastic in the oceans than fish, with the equivalent of 1 garbage truck full of plastic entering the ocean every minute. Only a small percentage, 8%, of all plastic produced has been recycled, the remainder has been sent to land-fills, to incineration or to China. As more and more corporations and countries strive to achieve a "plastic neutral" footprint, Clean-Seas is poised to become the world's leader in turning waste plastic into clean burning energy.

Clean-Seas is a solutions provider coupling advanced technologies with customer need to solve this growing problem. The Company's business model takes mixed waste plastic and using advanced pyrolysis technologies, recycles it into commodities for sale such as: clean burning fuels for energy generation, eco diesel, carbon black, and gasses. Additional expected lines of revenue for the Company include: gate fees to accept the waste plastic, carbon credits and plastic credits. The Company has letters of intent for projects in the South Pacific, Asia and Africa.

Clean-Seas was established in 2019 to address the global plastic waste issue on-land, mitigating what waste ends up in the oceans. "90% of the plastic waste in our oceans comes from just 10 rivers in the world, said Dan Bates, CEO of Clean-Seas, if we don't tackle the problem of the waste that is generated on-land, we will never begin to clean up the problem that exists in the oceans, we must shut off the spigot."

Clean-Seas has established relationships with plastic recycling technology providers and will leverage its global experience in the renewable energy sector to set up waste to energy facilities in emerging and developed nations, all of whom must address their own waste plastic issues. With China having closed its borders to accepting waste plastic under its "National Sword" program, developed nations now must find new ways of dealing with the volume of waste produced annually. The Company will conform to the United Nation's Sustainable Development Goals (SDG) for waste plastics, clean energy generation and social impact creating a variety of new partnering opportunities for its business model. Using blockchain technology the Company will provide data on all of its facilities to transparently track the volume of plastics being recycled and the output streams generated.

"After meeting with Clean-Seas and understanding the scope of this global problem, and the company's laser focus on how to address this growing crisis, it was clear to me that Clean-Seas

has the right approach and established team to be successful and make a dramatic impact," said Chris Percy, President of Byzen Digital. "This pending merger will not only be good for the Byzen shareholders, it will be a win for the planet and future generations," continued Percy.

Clean-Seas is expecting its first deployments to be commissioned and operational by Q4 2020.

About Byzen Digital Inc.

Byzen Digital is a Public company trading on the OTC Pink Current Market and is presently focusing on mergers and acquisitions in high growth industries.
