Geofencing is a technology that defines a virtual boundary around a real-world geographical area. In doing so, a radius of interest is established that can trigger an action in a geo-enabled phone or other portable electronic device.

The use of smartphones has enabled small- and medium-scale businesses to reach out to customers visiting their premises. Access to applications, like Google Earth, has allowed people to know about the nearby places. A small business uses geofencing to let the customers in the locality know about its new products and offers and retain them, if they visit the locality. The demand in this segment is increasing, particularly in developed and emerging countries, mainly in urban areas.
