

# Teguar Publishes Computer and Touchscreen Cleaning Guide Amidst Coronavirus Outbreak

*As a provider of touchscreen panel computers and tablets used in industrial and medical applications, Teguar shares tips on disinfecting computers for COVID-19.*

CHARLOTTE, NORTH CAROLINA, UNITED STATES, April 1, 2020 /EINPresswire.com/ -- In an effort to help limit the spread of COVID-19, Teguar is distributing information on ways to effectively disinfect computers, especially touchscreens and other surfaces used by multiple people on a regular basis.

With the rapid spread of COVID-19, concerns about cleaning and sanitizing surfaces have never been greater, particularly in public areas where many people come in contact with a surface. Touchscreen computers are all around us, in kiosks, digital signage, healthcare facilities, manufacturing plants, at the grocery store, and on our appliances.

"A great way to build confidence with your customers is to publicly display your cleaning procedure, so they know the measures you are taking to protect them" says Shira Sagal, Marketing Manager for Teguar Computers. "We hope that our free downloadable guide will be used by businesses to demonstrate that they have a sense of control over their own sanitation efforts during this otherwise uncertain time."

While the one page cleaning guide is designed to be short, easily digestible, and easy to read from a short distance, Teguar has also published a more thorough guide to disinfecting touchscreens and computers on their website. The blog goes into detail on how to disinfect a number of devices including phones, tablets, personal computers, industrial computers, fanless PCs, antimicrobial computers, and stainless steel computers.

A great way to build confidence with your customers is to publicly display your cleaning procedure, so they know the measures you are taking to protect them."

*Shira Sagal, Marketing Manager for Teguar Computers*

Teguar also provides a list of chemicals and cleaning solutions from [the CDC](#) for use on various computer surfaces like glass, aluminum, anti-microbial plastic, stainless steel, and more.

The one page touchscreen and computer cleaning guide, designed to be printed and posted in public areas, is available to download free of charge by

## How to Disinfect Your Computer

Effective Computer Cleaning Procedures to stop the spread of COVID-19

- 1 POWER DOWN & UNPLUG PC**  
Shut down your PC in the operating system, then unplug it. If you are using an industrial or medical PC designed to be cleaned while powered on, use the lock-screen key.
- 2 WEAR DISPOSABLE GLOVES**  
Wearing gloves is the best way to protect yourself from exposure to the Coronavirus, especially if you are cleaning healthcare or public computers.
- 3 SPRAY DISINFECTANT ON CLOTH**  
Use a microfiber cloth. If you don't have microfiber, use 100% cotton or another soft material. Only use approved cleaning chemicals, as some chemicals will degrade the surface.
- 4 WIPE TOUCHSCREEN & BEZEL**  
With your microfiber cloth, wipe down the entire surface of the computer, leaving the surface visibly wet. Thoroughly clean crevices, such as the perimeter of the touchscreen.
- 5 DISPOSE OF GLOVES & CLOTH**  
If you used non-disposable gloves or cloth, wash them in hot soapy water after cleaning your computer. Also wash your hands when you are done cleaning.

**DO NOT**

- Mix cleaning chemicals
- Use high concentration of alcohol (>70%)
- Use ammonia-based products
- Directly spray the computer

**DO**

- Clean your computer in a well ventilated area away from flames
- Read the product manual to verify cleaning agents
- Clean personal devices daily and shared devices between each user
