[Waste-to-Energy Market 2020](#)

Description: -

Waste-to-energy (WtE) or energy-from-waste (EfW) is the process of generating energy in the form of electricity and/or heat from the primary treatment of waste, or the processing of waste into a fuel source. WtE is a form of energy recovery. Most WtE processes generate electricity and/or heat directly through combustion, or produce a combustible fuel commodity, such as methane, methanol, ethanol or synthetic fuels.

Scope of the Report:

This report focuses on the Waste-to-Energy in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Waste-to-Energy (WtE) technologies are being presented as an attractive option, to solve not only the pressing waste disposal problems but several other challenges simultaneously, including shortages in power generation, limited space for landfills, and greenhouse gas (GHG) emissions from inappropriate waste disposal. However, the introduction of WtE technologies is often jeopardized, by missing tariff systems to fund investments and operation costs, weak enforcement of environmental laws, and limited qualified staff to run the installed systems in an effective and efficient manner.
