Bioenergy is renewable energy which is created from natural and biological sources such as plants, animals, and their by-products. Bioenergy has the potential to decrease the carbon footprint and improve environmental conditions. This bioenergy uses some amount of carbon dioxide as a traditional fossil fuel, but that impact is minimized by replacing the plants. Plants

obtain their source from the sun through photosynthesis hence providing better bioenergy. Modern technology even makes landfills or waste zones potential bioenergy resources. It can be used to be a sustainable power source, providing heat, gas, and fuel.
