

Virtual Electronics Launches Augmented and Virtual Reality Technology for Mobile Apps

Development of AR and VR apps to benefit a range of industries from medical to gaming

SINGAPORE, April 17, 2020 /EINPresswire.com/ -- Virtual Electronics, a Singapore-registered outsourcing software development company, launches augmented and virtual reality technology

“

...entrepreneurs are often motivated by their desire to save costs while engaging the services of a qualified specialist who does not have to be tied to the company on a permanent basis.”

Dr Victor Paul

for mobile app development. Business in Singapore and Asia will benefit from its cutting-edge technology and expert IT solutions that are backed by a main office in Singapore and development offices all over Ukraine and Belarus. The company aims to leverage its prime location in Singapore as an entry point to the ASEAN market and make AR and VR apps more accessible in the region. Virtual Electronics' AR and VR apps are compatible with both iOS and Android.

With just a smartphone, Virtual Electronics allows businesses tap on new channels of marketing through AR and VR technology to change the way customers

experience the product. On top of AR and VR capabilities to effectively communicate content to users, the company provides mobile app development and software development services that are outsourced to its development offices in Ukraine and Belarus. Due to their education in the field of exact sciences and programming, specialists from Eastern Europe are well-coveted.

Any client who works with Virtual Electronics is assured that the app will be developed from end to end, for 100% readiness. Client assistance is offered when faced with difficulties in independent project development in the future.

Dr Victor Paul, Senior Representative of Virtual Electronics, says “Nowadays, there are dozens of reasons why businesses are interested in outsourcing. From our experience, entrepreneurs are often motivated by their desire to save costs while engaging the services of a qualified specialist who does not have to be tied to the company on a permanent basis.”

Virtual Electronic believes that any company that relies on growth and development should be as flexible and open as possible. This is especially true for the market of outsourcing services. The company started out in website development but realised the long overdue need for mobile app development services that will help businesses save time and money. Since 2019, they have helped over 70 clients ranging from industries that span finance, retail and tech.

They hope to further their interest in the creation and implementation of their own hosting products to help even more clients achieve efficiency and results.
