

VIDIZMO helps Zoom customers securely store, manage and distribute meeting recordings

VIDIZMO Offers Zoom Customers a Discount Amid the COVID-19/Coronavirus Pandemic

TYSONS, VA, USA, April 17, 2020 /EINPresswire.com/ -- <u>VIDIZMO</u>, a Gartner-recognized enterprise video platform, today announced a new

release of its integration with Zoom, a leader in modern enterprise video communications. Available on the Zoom App Marketplace, VIDIZMO is offering its video streaming and management solutions, namely EnterpriseTube and Virtual Academy, for free for the initial two (02) months through Azure Marketplace and AWS Marketplace.

Furthermore, VIDIZMO is offering a 20% discount through VIDIZMO Cloud for all Zoom customers to help organizations bridge communication gaps and address business continuity challenges resulting from COVID-19/Coronavirus pandemic. This integration brings together Zoom's video communication platform and VIDIZMO's video content management platform, allowing Zoom customers to securely transform recorded meetings into manageable, searchable, and shareable on-demand videos on a YouTube-like video platform.

The solution automatically uploads Zoom recordings to VIDIZMO's video platform. Once uploaded, the Zoom recordings are encoded for optimal playback on any browser or device and then indexed for Google-like platform and inside-video search, enabling viewers to search on any spoken word, faces, or shared text from within the meeting, detected through VIDIZMO's Artificial Intelligence features.

Aleks Swerdlow, Product Marketing Manager for the Zoom App Marketplace, said, "We're always looking for ways to give our customers the ability to do more with Zoom. We are excited to have the VIDIZMO Video Content Management and Portal integration go live on our Zoom App Marketplace to help Zoom customers store, share, and search Zoom Meeting recordings securely."

"In these challenging times, online meetings are an incredibly efficient way to exchange ideas and expertise, and through our integration with Zoom, we provide an automated workflow for publishing these recorded meetings, replaying them in full fidelity, and making any instance searchable that is discussed or shown in the meeting," said Nadeem Khan, CEO of VIDIZMO.

VIDIZMO understands the security and privacy concerns of customers around recorded meetings, such as saving to a storage space that isn't protected by a password or recorded videos being found by anyone searching online. Therefore, VIDIZMO adheres to the industry's highest standards for platform and content-level security to keep your recorded meetings and digital assets protected through features such as Single Sign-On (SSO), Role-Based Access Control (RBAC), channel and user segregation, and password-protected videos. VIDIZMO delivers a highly collaborative video ecosystem while driving the best security practices to maintain

organizational data integrity and confidentiality. These security features provide them with control and the confidence they need to securely upload Zoom recordings flexibly and firmly into the environment of their choice.

Zoom users can also securely embed videos and playlists into learning management systems (LMS), content management systems (CMS), customer relationship management systems (CRM), and other web portals. They can also audit employee viewing activity through VIDIZMO audit logs and analytics to ensure compliance with internal policies and industry regulations.

Furthermore, VIDIZMO offers Zoom users several options for secure content storage, either onpremises, on any customer-owned or VIDIZMO hosted and managed cloud such as Microsoft Azure and Amazon Web Services (AWS). These types of cloud providers help customers address security and compliance issues at every stage of their cloud journey; moreover, Zoom users can also implement a hybrid deployment to leverage the benefits of both the environments.

VIDIZMO allows Zoom recordings to be stored behind a firewall and some in the cloud in another geographic location to address privacy laws, enabling a flexible storage solution. Businesses can store their recordings in any location in the cloud or on-premises, host some Zoom recording on any number of on-premises locations while others in the cloud, and intelligently branch users to the appropriate location. Also, organizations can move all or some recordings off Zoom. VIDIZMO offers recording deletion from the Zoom cloud, enabling content security and improving resource usage.

The discounted solution between VIDIZMO and Zoom Video Communications can be <u>found here</u> or by following this link (<u>https://bit.ly/2yni9Tr</u>).
