

# KEYi Tech Launches ClicBot, the World's Most Innovative and Educational Robot

---

*Modular building blocks make for intuitive design and learning, teaching kids how to code in a fun and engaging way*

SAN FRANCISCO , CALIFORNIA, UNITED STATES, April 24, 2020 /EINPresswire.com/ -- KEYi Tech Ltd. announced the release of ClicBot, the most versatile and intuitive home robot designed for fun and to teach STEM concepts to kids. ClicBot is modular; its intuitive pieces snap together to create hundreds of different robots. With 100+ applications available, ClicBot is fun right out of the box with skills and abilities that provide new ways to learn and play.

ClicBot is your family's newest friend. He listens, thinks, and even reacts. His personality is contagious, and his playful design makes him even more lovable. More than that, he's an engaging teacher that knows how to make learning fun.

He has more than 1,000 different configurations, so you can build yours to climb, dance, crawl, drive, or even serve your morning coffee. ClicBot has more than 200 interactions like nuzzling up to you when you pet him, trying to find you when you cover his eye, and getting excited when you put him in the charging station. There are two setups with predefined personalities (Bic and Bac), so you don't need to code. ClicBot's personality adjusts depending on how you build him. Each setup has its own unique combination of use cases, ensuring that ClicBot is forever engaging and always fun.

ClicBot starts basic. Build your new robot and get a grasp on robotics by clicking pieces together. No coding is required. Ready to level up? ClicBot is fully programmable with a friendly drag-and-drop coding interface based on Blockly by Google. Want to take it up another notch? ClicBot is also compatible with Python, so if you're a parent who wants to code something more complicated for your kids, you can.

ClicBot owners can upload their videos to the ClicBot community and browse videos from other users. Learn from others and let them learn from you, the perfect combination of creativity and education.

The standard ClicBot kit includes one brain, 6x joints, 3x skeletons, 2x wheels, one mount, one phone holder, 4x foot pressure sensors, 2x suction cups, USB type C cable, and the ClicBot Academy app. With that, owners get 30 robot setups in addition to anything their creativity designs. With foot pressure sensors, you can build a four-legged pet, and with the suction cups it can climb vertically. With the phone holder, you can put to use cool photography features like panorama, time-laps, follow shot and more.

ClicBot is available for pre-order at <https://igg.me/p/2590949/x#/> starting at \$299.
