Definition:

A radio frequency identification reader (RFID reader) is a device used to gather information from an RFID tag to track the individual object. The RFID tag is an electronic tag that exchanges data with an RFID reader through radio

waves. The RFID tag is also known as RFID chips. This technology is similar in theory to bar codes. The active tag transmits its unique ID in every 2 seconds and will operate for about a year. RFID tag is frequently used for merchandise, but it can also be used to track pets, vehicles, computer equipment, mobile phones, and even patients with Alzheimer's disease. The tag

transmission range may be limited to several meters from the reader. Growing adoption of wireless RFID readers in various fields such as from warehouse to corporate companies, growing retail industry and wide adoption & creation of RFID tags for supplying chain management are the major factor propelling the global wireless RFID readers market.
