According to the National Institute of Dental and Craniofacial Research, the geriatric population has an average of 19.9% teeth remaining which contributes to a highly profitable market for dental implants since dental and cosmetic issues arise due to aging. A dental implant is a synthetic tooth root which is positioned into jaws to keep an alternative enamel or bridge. The demand for dental implants is increasing as the Dentists gives a super and perfect solution for synthetic tooth surgically imbedded in upper and lower jaws. The World Health Organization suggested that nearly 10 million people are injured or disabled due to road accidents every year and American Academy for Implant Dentistry states that 5 million people undergo crown and bridge replacement for missing teeth. The technological advancement in dental implant surgical operation includes laser dentistry, CAD (Computer Aided Design) and mini dental implants also are driving the dental implants market.
