Simplifying Cybersecurity

MELBOURNE, VICTORIA, AUSTRALIA, May 4, 2020 /EINPresswire.com/ -- Australian based Unified Threat Management (UTM) developer and manufacturer, Red Piranha, has unveiled its new, highly anticipated, move into the Secure access service edge or SASE market with its new Cloud Client Dashboard at this week's product launch.

Known for its market-leading managed Unified Threat Management (UTM) platform, Crystal Eye (CE), the company's latest product launch both extends the capability of partners to manage their client's environment as well as greatly simplify its interface. Significant modifications to a range of analysis and reporting tools have provided enhanced capabilities to protect and defend clients' environments as well as further automate the Governance, Reporting and Compliance capabilities.

The enhanced platform boasts several improvements including;

- Compliance and Governance tracking and Reporting
- Security Orchestration, Automation and Response (SOAR)
- Multi-tenant capability, a critical feature important to MSSPs
- A sneak peek at the new appliances for on-premise equipment
- Reference to the next evolution of Red Piranha's SIEM

In addition to this recent product launch, the company has plans to announce several more product launches later in 2020 with a new range of Crystal Eye desktop units in the works featuring a more streamlined design, an impressive list of new features including Gen10 technology and a new, high-speed model.

The Crystal Eye platform already has impressive features on-premise and boasts the highest performance of any UTM appliance on the market. The introduction of the multitenant cloud platform allows partners to manage cybersecurity for multiple end-clients and extent full

cybersecurity SOAR offerings to multiple clients from a single pane of glass.

The company also unveiled the platform offering to be released on numerous cloud platforms, offering partners and clients choice with selecting and deploying a hybrid on-premise and cloud offering.

The move marks an expansion into the SASE security model, allowing identification of users and devices, applies policy-based security and delivers secure access to the appropriate application or data.

Some of the benefits of this deployment offering include;

- Flexibility with cloud-based infrastructure and implementation to deliver security services such as threat protection, web filtering, DNS security, data loss prevention and next-generation firewall policies.
- Reduced complexity and extended ongoing vulnerability and risk management.
- True Security Orchestration and Automated response with on-demand incident response and forensics.
- Ability to deploy a true zero-trust model to all users and devices including BYOD and IoT across a hybrid cloud environment.
