

Global Diabetic Foods Market Segments And Growth Rate

The Business Research Company's Latest Report On Diabetic Foods Market Global Report 2020-30: Covid 19 Growth And Change

LONDON, GREATER LONDON, UK, May 8, 2020 /EINPresswire.com/ -- The global diabetic foods market is expected to grow from \$10.9 billion in 2019 and to \$11.1 billion in 2020 at a growth rate of 1.78%. The slow growth in 2020 is mainly due to the economic slowdown across countries owing to the COVID-19 outbreak and the measures to contain it. The market is then expected to grow and reach \$13.92 billion in 2023 at rate of about 7.81%. Increasing cases of juvenile diabetes among children and youth is expected to drive the growth of the diabetic foods market. However, labeling food is a key factor hindering the growth of the market. There has been a concern for some time that labeling food as 'diabetic' could confuse people with diabetes into believing that such food is important or at least especially necessary.

The diabetic foods market consists of sales of diabetic foods and related services that are used in supermarkets and hypermarkets, stores or pharmacies, grocery stores, and online stores. Diabetic food products are dietary products which have reduced carbohydrate content and sugar content. Diabetic foods also include low calorie sweeteners, diet beverages, etc.
