## Description

Silica fume, also known as micro silica, is an ultrafine powder collected as a by-product of the silicon and ferrosilicon alloy production. Silica fume is an ultrafine material with spherical particles less than  $\mu\text{m}$  in diameter, the average being about  $0.15 \mu\text{m}$ . So it also called the ultrafine silica fume.

Silica fume is an ultrafine powder collected as a by-product of the silicon and ferrosilicon alloy production. The "smoke" leaving the plant is actually silica fume. Today in many countries, due to pressure for environmental protection, no silica fume is allowed to escape to the atmosphere.
