

Global Gluten Free Food Market Growth Rate, 2023

The Business Research Company's latest study on Gluten Free Food Market Global Report 2020-30: Covid 19 Growth And Change

LONDON, GREATER LONDON, UK, May 14, 2020 /EINPresswire.com/ -- The global gluten-free food market is expected to grow from \$4.97 billion in 2019 and to \$5.07 billion in 2020 at a growth rate of 2.08%. The slow growth in 2020 is mainly due to the economic slowdown across countries owing to the COVID-19 outbreak and the measures to contain it. The market is then expected to grow and reach \$6.43 billion in 2023 at a rate of about 8.25%. The increasing incidence of irritable bowel syndrome (IBS) and celiac diseases is expected to contribute to higher demand for gluten-free food products. However, the high cost associated with gluten-free products in comparison with the gluten-containing products is anticipated to limit the growth of the market over the coming years.

Gluten is a group of proteins found in various grains including barley, wheat, and rye. Gluten-free food items are consumed mostly by people with celiac disease or are allergic to gluten. Gluten-free food comprises fruit & vegetable, meat, fish, potatoes, rice, lentils, and others. The benefits associated with the consumption of gluten free food include weight loss, increased energy, and improved health.

Trends In The Gluten Free Food Market

The need for gluten free products is driving innovation across food industry, especially in the bakery sector. In November 2018, Veripan, specialist in food products, announced the launch of “breakthrough” all-purpose flour mix for gluten-free baking. This is a completely natural solution discovered to create gluten free bakery products while avoiding crumbly textures, dryness, and off-flavors.
