

Global Organic Snack Food Manufacturing Market Opportunities And Strategies

The Business Research Company's latest study on Organic Snack Food Manufacturing Market Global Report 2020-30: Covid 19 Growth And Change

LONDON, GREATER LONDON, UK, May 20, 2020 /EINPresswire.com/ -- The global organic snack food manufacturing market is expected to grow from \$10.6 billion in 2019 and to \$10.9 billion in 2020 at a growth rate of about 3%. The slow growth in 2020 is mainly due to the economic slowdown across countries owing to the COVID-19

outbreak and the measures to contain it. The market is then expected to grow and reach \$16 billion in 2023 at rate of 13.6%. The growth in spending capacity of end users coupled with the growing health consciousness and rising consumption of organic foods by the populace is driving the market. This is owed to harmful side effects of conventional snacks including increasing calorie content, increasing obesity, and less nutritional benefits. However, the high cost of production is anticipated to hinder the growth of the organic snack food manufacturing market.

The organic snack food manufacturing market consists of sales of non-GMO nutritional food items and related services. Organic snack foods are manufactured using organically certified ingredients that do not contain genetically modified organisms (GMOs) and artificial additives. Organic snack food contains healthy nutrients and ingredients such as minerals, proteins, and vitamins. For example, nutritious and gluten-free items which include tortilla chips, corn chips, potato chips, chocolates, raisins, bagel, pretzels, cookies, and pancakes, made from organic ingredients are termed as organic snack food.
