Based on our analysis, the global healthcare chatbots market in 2019 is close to USD 148 million and is expected to reach around USD 563 million by 2026. The anticipated CAGR for the global healthcare chatbots market is more than 21% from 2020 to 2026.

A chatbot is an AI-powered software adopted by different industries for instant and effective interaction with their clients either in textual or audio format. The industries have included a distinct option on their web-portal or mobile application for conversing with clients. Chatbots play a vital role in the healthcare sector to assist the patients instantly in the state of emergency by the time clinicians are available for primary care and diagnosis. Though health bots can't conduct authorized diagnosis, their AI memory manages to autonomously presume the disease based on certain symptoms.
