the fully orchestrated SD-WAN solution form nacXwan offers routing, Security and application QoS

PARIS, FRANCE, May 26, 2020 /EINPresswire.com/ -- Paris, the 26th May 2020

nacxWan 11.0 : Application QoS

[nacXwan](#) the leading provider of SD-WAN as a Service announce today the release of its new software version 11.0 , to offer more features and benefits of the fully orchestrated SD-WAN.

"With the progressive return to normal business, nacXwan want to offer more features to its customers to increase the SD-WAN benefits in a secure and more affordable manner. Thanks to this new release, our customers will have the ability to give more bandwidth for business application without increasing their telecom bill. According to our major Partners, this release clearly differentiates nacXwan as a leading provider in SD-WAN solution" said Dominique Meurisse, nacXwan Vice President Sales.
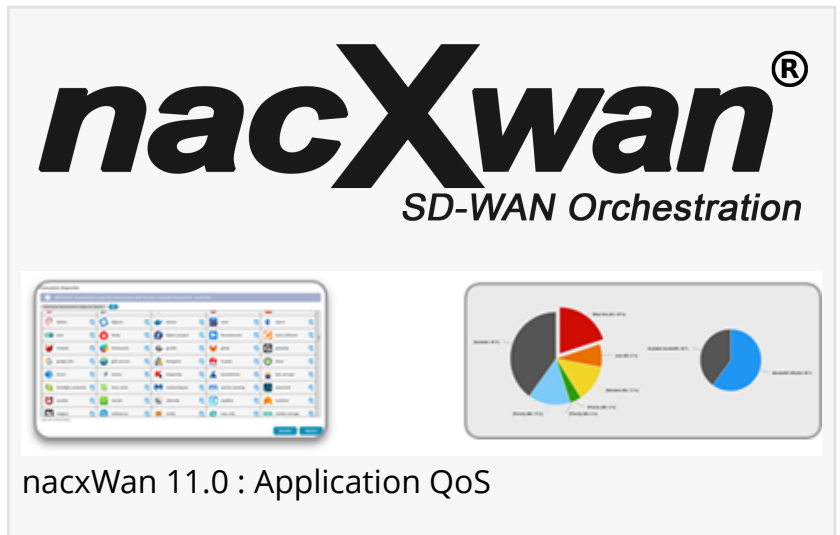

Major features with the new release are :

-⯑Channel technology allowing the aggregation of different internet links to a central point (HUB), to increase the available bandwidth (Bounding);

-⯑Application QoS, distribution and prioritization of application flows, reporting of bandwidth consumption by application, with so far more than 700 applications recognised.

-⯑New uCPE, in partnership with Lanner, with the support of 64bytes to offer more performance with the best affordable price
