

Bay-Bay Water's Made-in-America Purified Distilled Water Now Available for Purchase on Walmart.com

The purified distilled water for babies is now available for purchase online.

MIAMI LAKES, FLORIDA, July 10, 2020 /EINPresswire.com/ --
Representatives with [Bay-Bay Water](#) today announced that the company is now selling its purified distilled water on [walmart.com](#).

"We are very excited to make our Made-in-America purified distilled water available on America's leading retailer's website," said Osmay Gonzalez, spokesperson of the company. "We are making it easy for parents to purchase Bay-Bay Water's purified water online."

The purified water in BPA-free and phosphate-free bottles are available in [12-bottle](#) and [24-bottle](#) packs at Walmart's online store.

"Distilled water is the purest form of drinking water on the planet," said Osmay before adding, "The purifying process occurs by boiling water into vapor and condensing it back into a liquid form. It is recommended for parents to use distilled water when mixing baby formula and cereals, to avoid an unhealthy intake of minerals."

The company recently redesigned its water bottles and its purified distilled water is now available in newly-designed bottles with water level markers

"The new bottle design helps parents know the amount of water remaining in the bottle to make it convenient and help them plan better," highlighted Osmay.

"Since life is constantly in motion, our distilled water is designed for easy, on the go use."

"To ensure we provide you with the best distilled water for baby formula, our quality control checks are extremely thorough," said Osmay. "Filter inspections and change-outs are on a strict schedule. Ozone levels are checked every hour. Daily and hourly records of ozone levels and filter changes are mandatory."

Osmay went on to explain that at its production facility, the single service bottles arrive wrapped

in cling film. Before the pallets of bottles leave the truck, he said, they are visually inspected to ensure no cross-contamination of any kind has taken place during transport. The pallets are stored in a secure area. Before each bottle is filled, it enters an enclosed chamber to receive a sanitizing ozone rinse. The purified water used to fill the bottles passes through a UV filter. Bottles are capped in the filler station, not sent open to the next stage of production.

As to why anyone should give Bay-Bay Water a try, Osmay said that its distilling process is carefully monitored and far above average.

“First the water is softened, then it passes through a 1-micron filter to screen out any microscopic impurities,” Osmay said. “Only filtered water enters the distiller, and following the distilling process, it is stored in temperature-controlled silos until it is ready for ozone treatment and packaging. Typically, water is purified by one of three processes: reverse osmosis, distillation, and de-ionization. Bay-Bay relies on the distillation process, which involved boiling, condensing, and steaming to provide the purest result.”
