

\$14K invested in gold explorer Great Bear 3 years ago turned into \$1M, put Straightup Resources Inc. on your Watchlist

Astute investors have started to pour money into precious metal related investments, Straightup Resources Inc. CSE:ST poised for upside share price revaluation.

NEW YORK, NY, UNITED STATES, September 11, 2020 /

EINPresswire.com/ -- Excitement runs high directly adjacent Straightup Resources' RLX project as its neighbor, Great Bear Resources, has announced the identification of gold target zones on its Sobel Property. Below is insight for individuals seeking exposure to precious metal related investments.

RLX North and South Properties of Straightup Resources Inc.

Gold and leveraging the potential in related mining stocks:

Uncertainty, fear, and money printing drive the price of gold. One look at

<https://www.usdebtclock.org> and it's not hard to understand where gold is headed.

“

Will Straightup Resources Inc. become the next Great Bear Resources?”

Mining MarketWatch Journal

Famed investor and multibillionaire Warren Buffett, the so-called Oracle of Omaha, who historically hated the yellow metal, has come around to the fact he can be comfortable now with gold as a store of value; his firm, Berkshire

Hathaway, has recently taken a US\$500-million stake in Barrick Gold. So too has scores of fund managers; fund managers such as Diego Parrilla of the \$450-million Quadriego Igneo hedge fund are placing investments on cheap assets looking to outperform when the market comes crashing down again -- Gold is at the top of his list.

Over the last few months Gold has been on a meteoric-like run, and is flirting with US\$2,000 an

ounce. What type of gold stocks are giving massive returns? It's definitely not the large-cap gold stocks. No, it's the junior mining stocks that have the upside potential to turn an ordinary investor into a market millionaire in the shortest amount of time.

Straightup Resources Inc. is a new public company, trading under the stock symbol ST on the Canadian Securities Exchange. Straightup Resources is focused on advancing its flagship RLX and Belanger properties located in the Red Lake District of Ontario, Canada. Red Lake is one of the more prolific gold mining districts in the world with nearly 30 million ounces gold having been produced from high-grade mines since 1925, greater than 80% of this gold was produced from Evolution Mining's Red Lake Complex (formerly owned by Newmont).

Today some of the most exciting exploration projects are ongoing in the district; Great Bear Resources is working its Dixie project, an 11+ km long high-grade gold system, just to the south of Straightup Resources' RLX Property, and Pure Gold Mining Resources is advancing to production for the end of this year.

Two years ago Great Bear was trading at approximately 50 cents/share, it has since experienced a greater than 38 times multiple share price appreciation, and greater than 76 times over 3 years. Obviously there are some really smart people over at Great Bear, they have a track record of being able to look at the big picture of what is going on geologically in the Red Lake District and predict where huge deposits of gold might occur. In 2019 Great Bear acquired additional ground it believed to be highly prospective, of particular note is its Sobel property which is almost entirely encircled by Straightup Resources' RLX property. The RLX property of Straightup Resources is prime ground that was staked prior to Great Bear announcing its Sobel acquisition by the entity that vended both the RLX and Belanger properties into the new public company.

In short, Straightup Resources is considered to have highly favorable geology for a major gold discovery of significance in a prime Red Lake District location.

On September 9, 2020 the Company announced "[Straightup Engages Exploration Consultant](#) to Compile and Reinterpret Historical Data on RLX North, RLX South and Belanger Properties, Red Lake District, Ontario" which comprise its Red Lake district property package. Collectively, the Properties form a contiguous land package of over 10,000 hectares partially surrounding Great Bear Resources Ltd.'s Sobel property.

Excitement runs high directly adjacent Straightup Resources' RLX project as Great Bear Resources has announced the identification of gold target zones on its Sobel Property; see related September 9, 2020 news from Great Bear Resources [here](#); on the Sobel property Great Bear has completed 399 samples, establishing a four square kilometre Spatiotemporal Geochemical Hydrocarbon ("SGH") survey similar to that used by Great Bear to successfully identify gold mineralization at the LP Fault, Dixie Limb and Hinge zones at the Dixie property.

The fact Great Bear has chosen Sobel (which is almost entirely encircled by Straightup) to explore, even before it has calculated a resource on its Dixie Project, shows just how prospective it believes this location to be.

The RLX PROJECT of Straightup Resources is large (~10,000 ha) and offers the big elephant size gold discovery potential with D2 faults interpreted to run through, and on-strike to the SE of the district's largest gold deposit (Red Lake Gold Mines – Evolution Mining). The property is underexplored as it has overburden with little bedrock outcropping, which has limited past exploration efforts in favour of other areas in the Red Lake District. Straightup Resources' technical team will be looking to target the contact zones of the volcanic assemblages that host the gold. A past operator has already drilled one hole (DDH-160-5-1 in the 80s) on RLX North that shows the geological contact between mafic/ultramafic vs. felsic intermediate rocks is present -- a major geological contact similar to what provided a pathway for gold laden hydrothermal fluids for success at Great Bear Resources on its Dixie property.
