Smarter Technologies is a G-Cloud 12 Crown Commercial Services Supplier

Smarter Technologies is an approved supplier in the UK Government's Digital Marketplace.

RINGWOOD, UNITED KINGDOM, September 23, 2020 /EINPresswire.com/ -- A leading Internet of Things (IoT) solutions company has been selected as a supplier to help public organisations access cloud computing services.

Smarter Technologies Logo

Smarter Technologies has been approved as a supplier on the G-Cloud 12 framework Digital Marketplace, which is managed by the Crown Commercial Services (CCS).

> We are happy to cement our position for another year for public sector organisations to take advantage of our industry-leading cloud-based services."
>
> *David Miller, Smarter Technologies Chief Technology Officer*

The framework is an innovative procurement initiative for public sector bodies that use cloud computing, including central government, local government and important sectors such as health and education and emergency services.

So far, over £5 billion has been spent via the first 10 versions of G-Cloud, which provides a simple route to market for SMEs to engage with public sector departments.

It is the second time that Smarter Technologies has been selected to be a part of the initiative, having previously been selected as a G-Cloud 11 supplier with the support of sister company Visionist.

"We are happy to cement our position for another year for public sector organisations to take advantage of our industry-leading cloud-based services," said Smarter Technologies Chief Technology Officer David Miller.

"We look forward to helping public organisations around the country realise greater efficiencies and cost-savings through our innovative and tailored technology solutions."

Smarter Technologies is able to provide a baseline service to help companies understand how

their sites and systems can migrate to the cloud.

Their innovative solutions include network security, appropriate smart building and compliance recommendations, asset tracking and monitoring, recommendations for utilities brokerage and other business services.

Smarter Technologies' services available through the framework include:

Amazon Web Services (AWS) Design and Integration Support

Unified Communications, Collaboration, Strategy Definition, Delivery and Support
Zero Trust Desktop-as-a-Service
Zero Trust Secure Cloud Hosting with ZScaler ZPA Application Layer Security
ZScaler Deployment and Filtering Services
ZScaler ZIA ZPA-Z-App Software License and Deployment Service

About Smarter Technologies

Smarter Technologies tracks, monitors and recovers assets across the globe in real time, providing asset tracking systems to the open market and fulfilling the world's most complex asset tracking requirements. Our services cover a vast array of business sectors, products and equipment, from container or pallet tracking to military-grade devices; and can be used across a broad spectrum of industries.

As a leading IoT company, we also provide smart building solutions for modern businesses, offering wire-free, battery-powered and low-cost IoT smart sensor technology. Our solutions put an end to scheduled maintenance and help businesses utilise their building's efficiency, benefitting from real-time alerts and facilities management tools that will bring them into the 21st century.

Our digital transformation services help government departments, businesses and not-for-profits achieve their goals through strategic leadership and digital innovation. We transform legacy systems into fully capable digital platforms that deliver real value through human-centric customer experiences.
