Auto Injectors Market - 2019-2026

\*\*\*Latest Updated Free Sample Report Is Ready to Dispatch

Market Overview: Auto Injectors

The global auto-injectors market size was evaluated at USD 767.7 million out of 2018 and is foreseen to show a CAGR of 19.5%. Increment in predominance of anaphylactic shock, ascend in mindfulness about these gadgets and inclinations of patients to pick self-administration of injections are the key elements moving the general market.

Auto-injectors are favored over regular gadgets as they empower proficient and improved drug delivery just as new formulations. Mechanical headways in items are foreseen to support development. For example, Humira by AbbVie, Inc. accompanies lock function and infusion start and end alerts

The use of auto-injector has brought many benefits for both the patient and healthcare professional. It has simplified self-administration, reduced anxiety, improved safety, and improved compliance. For instance, most of the currently available disease-modifying therapies available in the market for the treatment of multiple sclerosis are administered through injection. This has always been considered as a source of fear for a large number of patients and a considerable cause of non-adherence to treatment. Auto injectors can address this issue by

ensuring that the injection is made at the accurate depth and can distinctly improve the comfort and tolerability of administration when compared to manual syringes. Data from various clinical trials support the use of auto injectors presenting that they improve adherence and the smaller gauge needles significantly reduce injection discomfort.

Top Key Players Of Auto Injectors Industry:

Haselmeier AG

BD

Antares Pharma, Inc.

Biogen Idec

Mylan, Inc.

Novartis International AG

Sanofi

Owen Mumford

Scandinavian Health Ltd (SHL)

Unilife Corporation

Ypsomed Holding AG

Aptargroup

Bespak  Consort Medical

Janssen Biotech

Genentech

Meridian Medical Technologies

Medeca Pharma AB

Kaleo, Inc

Auto-injectors offer different points of interest, for example, they lessen phobia anxiety related to needles, diminish odds of needle stick injuries, keep up consistency of dose accuracy, and help with better efficacy, which, thusly, help development. Drug delivery from an auto-injector is progressively controlled contrasted with manual infusion.

The infusing site of a specific drug is picked dependent on nature of the drug, yet it is typically

managed intramuscularly. Auto-injectors are less excruciating contrasted with syringes, which expands their interest. In any case, accessibility of choices, for example, oral tablets may upset development.

Advancements in gadget functions are likewise foreseen to help development. For example, in September 2015, Bayer HealthCare propelled an electronic auto-injector used to treat relapsing-remitting multiple sclerosis, which offers total measurements of the drug for improved consistence and conceivably lessens the general expense. The SHL gathering offers different sorts of auto-injectors with enormous volumes and high consistency.
