

# Omega Ratios of Canadian Farmland

*How certain can you be that Canadian farmland will hit your return targets?*

CALGARY, ALBERTA, CANADA, October 15, 2020 /EINPresswire.com/ -- Omega Ratios of Canadian Farmland

FOR IMMEDIATE RELEASE, ATTENTION INVESTMENT EDITORS

How certain can you be that Canadian farmland will hit your return targets?

According to a recent Omega ratio research report from Veripath Farmland Partners the likelihood over most return ranges is high. The Omega ratio is a weighted risk-return ratio for a given level of expected return that helps to identify the probability of winning in comparison to losing - higher the better.

Carmon Blacklock, VP of Investments & Operations at Veripath Farmland Partners, stated that "according an internal review of the Canadian farmland investment market over the last 10 and 20 years, a farmland holding would have generated Omega ratios substantially above 1.0 for a return threshold of 5%. At a return threshold of 10% the Omega ratios were still substantially above 1.0 in the 10-year period, while ranging between 0.3 and 0.55 for the 20-year period."

"Our data shows that even with relatively high nominal return requirements farmland in Alberta, Saskatchewan and Canada - based on the last 10 and 20 years - can be reasonably expected to meet or exceed portfolio expectations; it is a high-quality investment" states Mr. Blacklock

Veripath's research confirms that you can put Canadian farmland into a portfolio and have a high likelihood of achieving portfolio targets and a low likelihood of underperformance.

Who is Veripath: Veripath is a Canadian alternative investment firm. Members of Veripath's management team have decades of farmland, private equity, and private credit investment experience. Veripath implements its farmland strategy in a way that seeks to preserve as far as

possible farmland's low-volatility return profile – the attribute that generates a material portion of Canadian farmland's superior risk adjusted return profile. Veripath does this by seeking to minimize operational, weather, geographic and business-related risks – and capture the pure return from land appreciation.
