

# Global Companion Animal Veterinary Vaccines Market Forecast To 2023

Major players in the market are Boehringer Ingelheim, Eli Lilly and Company, Heska, Merck Animal Health, Virbac, Zoetis

LONDON, GREATER LONDON, UK, October 16, 2020 /EINPresswire.com/ --

The global [companion animal veterinary vaccines market](#) is expected to decline from \$2.72 billion in 2019 to \$2.60 billion in 2020 at a compound annual growth rate (CAGR) of -4.34%. The decline is mainly due to the COVID-19 outbreak that has led to restrictive

containment measures involving social distancing, remote working, and the closure of industries and other commercial activities. The entire supply chain has been disrupted, impacting the market negatively. The market is then expected to recover and reach \$3.22 billion in 2023 at a CAGR of 7.43%. Increased pet ownership by Gen X and Gen Y adults contributed to the growth of the companion animal veterinary vaccines market during the historic period. However, the high cost of veterinary vaccines is expected to restrain the growth of the market.

Companion animal vaccines are substances that are used to stimulate the production of antibodies and provide immunity against one or several diseases in pets such as dogs, birds and cats. Only goods and services traded between entities or sold to end consumers are included.
