LamasaTech Launches Second Generation Sign-In Kiosk with Temperature Screening: The Zentron 8

The Zentron 8 provides a seamless and safe sign-in experience for businesses, with a PCAP touchscreen, QR code scanning and quick sign-in with access cards.

NEWCASTLE UPON TYNE, UNITED KINGDOM, October 19, 2020 /EINPresswire.com/ -- LamasaTech has announced the launch of the Zentron 8, the second-generation line of their Zentron kiosk. The Zentron 8

empowers businesses to safely manage access to their facilities and provide a seamless and safe sign-in experience for employees, visitors, contractors and delivery personnel. Thousands of the first-generation devices have been used in enterprises worldwide since March to read an individual's temperature, record entry logs and provide a reminder to wear a mask.

> We are excited to offer our most comprehensive and powerful sign-in technology yet, which can be seamlessly integrated with our customers' existing processes and will provide long-term ROI."
>
> *Mahmoud Elsaid, Managing Director at LamasaTech*

The Zentron 8 delivers true flexibility for businesses to streamline their sign-in and access procedures. The 8" screen is PCAP touch-enabled, which paves the way for future use with touch applications, whilst the process remains completely automated where contactless sign-in is preferred. If temperature screening is not desired, the temperature sensor can be disabled or detached from the kiosk effortlessly.

Designed for its time-saving capabilities, the kiosk delivers fast sign-in journeys with built-in RFID and QR code readers. A multi-frequency RFID reader, compatible with 13.56Mhz, 125Khz, Mifare, NFC, HID, Paxton and PAC, allows employees and other registered cardholders to sign in with a quick tap. Visitors and staff can scan their QuickPass entry pass on the QR code reader from their mobile device.
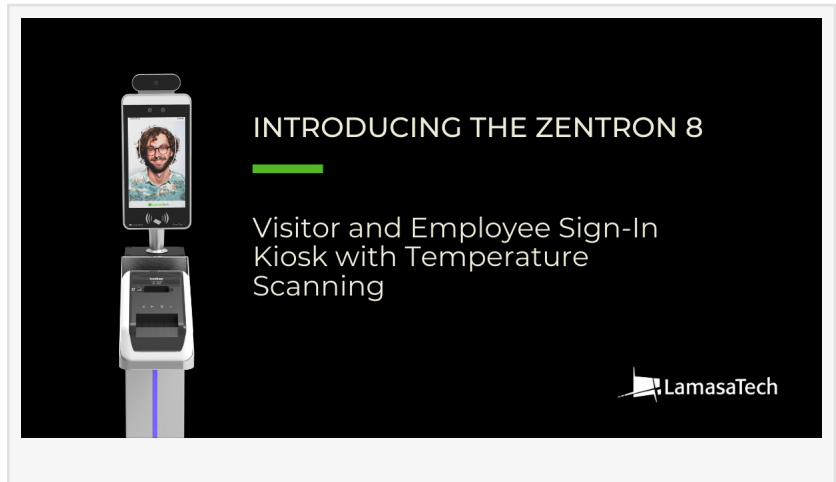

Reception and facility teams can monitor the device and users entering the facilities from behind their desk with the HDMI output, which mirrors the device to another screen. The kiosk can be mounted on a desk, wall or floor stand, or integrated within an existing surface including turnstiles and gates. This new generation device offers dual frequency WiFi (2.4Ghz/5Ghz) and a stronger WIFI antenna design.

"When the pandemic began, we rapidly released the first temperature screening kiosks in the market as organisations urgently needed a solution to perform quick checks on entry. As the environment evolves, we continue to innovate and enhance our solutions to match the needs of our customers," said Mahmoud Elsaid, Managing Director at LamasaTech. "We are excited to offer our most comprehensive and powerful sign-in technology yet, which can be seamlessly integrated with our customers' existing processes and will provide long-term ROI."

The Zentron 8 features toughened glass and ruggedised casing to withstand high footfall areas and 24/7 usage, paired with soft metal edges which will effortlessly complement any reception or lobby environment.
