

Provar expands Salesforce test automation with reusable tests for multi-language companies

LONDON, UNITED KINGDOM, October 22, 2020 /EINPresswire.com/ -- [Provar](#), the leading Salesforce test automation solution for Salesforce enterprise customers, today announced support for their first non-European language to Provar's existing [internationalization](#) capabilities and a mechanism where customers can extend Provar to include any language they

Provar is designed to help teams simplify the complexities of testing, get more value out of Salesforce and empower users."

Geraint Waters, Provar Chief Executive Officer

choose. To simplify the complexities associated with multi-language testing, Provar customers can now create and reuse DevOps ready, end-to-end tests to support Salesforce users in English, Danish, Dutch, German, Italian, Portuguese, Spanish, French, Swedish and now Japanese. In addition to the language support bundled in Provar, customers can also add additional language support by authoring and distributing simple translation files.

Provar's internationalization feature is designed to help

Salesforce developers and release teams avoid the challenges associated with building and maintaining separate tests for different languages. With Provar, teams can create a single, reusable test in Salesforce in one language and re-run that same test in other languages.

"Because we've always maintained environment and user profile independence by using metadata, we have been able to uniquely extend test execution and maximise reuse," said Richard Clark, Provar Chief Technology Officer. "It's just not scalable for teams supporting a multitude of Salesforce users to write and maintain hundreds of tests for each and every supported end-user language. That's why we don't just support out-of-the-box language translations -- Provar also hooks into the Salesforce API to learn any local language customisations configured using Salesforce Translation Workbench. If you want to accelerate innovation in your organization, test automation that can manage the intricacies of internationalization is a must."

Given the critical interdependencies of multinational teams and the trend to expedite Salesforce releases, the demand for solutions that can help release managers and development teams streamline regression testing has become even more prominent.

“Many of our customers operate globally with distributed teams located in more than one country,” said Geraint Waters, Provar Chief Executive Officer. “That's why in addition to providing an extendable solution for languages we're also hard at work to ensure locale settings are equally simple to execute and we are on track to support the new ICU Locale format. It's a natural extension of what we do. Provar is designed to help teams simplify the complexities of testing, get more value out of Salesforce and empower users.”

About Provar

At Provar we're the experts in Salesforce testing. Pairing intuitive testing solutions with world-class service, we help you deliver robust, scalable and repeatable testing to achieve release agility, drive down system errors and get the maximum return on your Salesforce investment.
