

# Oil Storage Market in North America Surpass \$931 million with at a CAGR of 4.8% from 2017 to 2023.

*Global North America Oil Storage Market 2017-2023: Business Development and Growth Opportunities by Industry Expert*

PORTLAND, OREGON, UNITED STATES, October 29, 2020 /EINPresswire.com/ --

Oil storage market in North America is projected to reach \$931 million in 2023, registering a CAGR of 4.8% from 2017 to 2023. Oil storage includes large tanks, sea tankers, and underground & above ground storage facilities to safely store various petroleum

products. These products are majorly oil-based products, which are produced by distillation, and are used by industries other than the refining industry. Increase in oil production across the globe has encouraged suppliers to develop storage infrastructure and inventories for oil storage.

Oil Storage

Oil storage refers to the mechanism used for safely storing various petroleum products. These products are majorly oil-based products, which are produced by distillation and are used outside the refining industry. Growth in global oil production encouraged the suppliers to develop storage infrastructure and inventory for oil storage. Oil storage includes large tanks, sea tankers, and underground & above ground storage facilities. Petroleum products are valuable commodities, which are used for various applications. These can be stored in salt mines, oil tankers, and tanks.

Furthermore, increase in oil production has encouraged suppliers to improve their inventories and infrastructure to store large quantity of crude oil. In terms of volume, the market accounted for 54,154 thousand CBM in 2016, and is projected to reach 73,633 thousand CBM in 2023, registering a CAGR of 4.4% from 2017 to 2023.

The major factors that drive the growth of the [North America oil storage market](#) include decrease in crude oil prices across North America, rise in need for mega refining hub, high degree of product containment, and increase in import or distribution facilities. However, decline in production & exploration activities and rise in inventory cost hamper the market growth. On the contrary, the development of strategic petroleum reserves and increase in oil demand are expected to provide potential growth opportunities for the market expansion.

The crude oil segment dominated the market in 2017. Crude oil is naturally occurring liquid form of petroleum, which is refined into other oil products such as petrol, paraffin, and diesel oil. It is stored in different type of storage tanks such as atmospheric storage tanks, open top tanks, and fixed roof storage tanks. Furthermore, the naphtha segment is expected to grow at the [highest CAGR](#) from 2017 to 2023, and is anticipated to continue its dominance during the forecast period.

The utilization rate of carbon steel-based storage tanks was high in 2016. However, fiber-reinforced plastic (FRP) segment is expected to grow at a highest CAGR during the forecast period, owing to the fact that FRP-based storage tanks are corrosion resistant, lightweight, easy to handle, leak proof, and require low maintenance.

Key Findings of the North America Oil Storage Market:

- The diesel segment accounted for around one-sixth share by volume of the North America oil storage market in 2016.
- The kerosene segment is expected to grow at a CAGR of 6.6% by revenue from 2017 to 2023.
- The steel segment accounted for around one-third share by volume of the North America oil storage market in 2016.
- Canada accounted for around one-fourth share by volume of the North America oil storage market in 2016.
- Mexico is expected to grow at the highest CAGR by revenue from 2017 to 2023.

U.S. was the leading revenue contributor to the North America oil storage market in 2016, registering a CAGR of 4.4% during the forecast period. This is attributed to the presence of large

number of key players and upsurge in demand for oil products across the country. However, Mexico is expected to grow at the highest CAGR during the study period, due to increase in use of oil products and rise in import export facilities.
