

ITFirms Lists Artificial Intelligence Software

ITFirm lists the best AI and ML Software in 2020!

UNITED STATES, November 4, 2020

/EINPresswire.com/ -- The increase in data volumes, advancements in algorithms, and improvements in computing power and storage have given some real food for thought to the data scientists. What used to be a figment of the imagination is now gradually turning into reality. It has already crept into our daily lives in form of chatbots (like in Amazon), Echo Dot (Alexa), Smart Bulbs (Like in Philips), Apple's Siri, Google Home, and remotes, doors, AC, Water Heater and many more. So we no longer need to type in (of course we can) on the screen and wait for the results to appear. We can always take the help of voice assistants or in case the human representative is not present, the chatbot can start the preliminary conversation. It helps those in hurry or those who are just too lazy to type in that time, or for those who do not know how to spell something that they are looking for.

[Software Development Companies](#)

build assistants that are backed up by some machine learning algorithms and they are capable of understanding human language, processing it in machine language and translating it into behaviour or action that can be understood by humans.

That's pretty cool. But what goes within the AI tools and ML algorithms is way more complex. Artificial Intelligence does make things simpler but has still not been explored to the fullest. Artificial Intelligence software can help us in many different ways like to filter spam, to catch any payment fraud, to alert businesses in real-time, to detect any suspicious activity, to handle incoming customer support calls, to increase organizational efficiency, to organize massive amounts of information, to predict customer purchase behaviour, predicting the weather, turning smart lights on/off, adjusting the temperature of the room, self-driving cars, managing traffic lights, managing parking facility, and many more things that are far beyond the capabilities of manual processing. What's more, AI can make all jobs redundant in the coming future with massive amounts of scattered and un-scattered data.

Refer to this for the complete list of best artificial intelligence software.

What's ITFirms About?

[ITFirms.co](https://www.itfirms.co) is a research firm that provides trusted and well-researched insights on top IT companies and trends worldwide.
