

# NOVA Scripts Central Joins the Population Health Alliance

*Regional charitable pharmacy expands its national leadership voice as advocates for the uninsured*

WASHINGTON, DC, USA, November 5, 2020 /EINPresswire.com/ -- [Population Health Alliance](#) (PHA), the industry's only multi-stakeholder professional and trade association solely focused on population health, today announced that [NOVA Scripts Central](#) (NSC) has joined the organization as a new member. NSC is a long time provider of quality integrated pharmaceutical care and medication access to the low-income uninsured children and adults of Northern Virginia, bringing life-saving medications that treat chronic conditions within reach for thousands of patients.

NSC's multi-branched population health approach combines medication access to the uninsured, a tool to help providers navigate Medicaid prescription drug coverage, a proactive immunization initiative, community health and wellness education, and a database of community support services called NOVA Scripts Compass.

"We are excited to welcome NOVA Scripts Central to the PHA community as a new member," said Brent Ling, Executive Director at PHA. "Their team is innovative and population-focused with a wealth of experience in deep community-engagement while also creating and fine-tuning provider-facing tools. Under Dr Donney John's leadership they are passionate advocates for the

uninsured in population health management and we look forward to their unique contributions to our field as new members.”

Donney John, PharmD, Executive Director at NOVA Scripts Central added, “We are excited for the opportunity to work with fellow alliance members on developing strategies to address the population health needs of the uninsured health safety net patients around the country. This opportunity will allow us to continue to grow our reach as well as allow us to improve the lives of countless more Americans.”

NSC recently announced a new partnership with Honeybee Health that will enable them to expand offering of affordable prescription medications to a wider range of people outside their patient base.
