PUNE, MAHARASTRA, INDIA, November 10, 2020 /EINPresswire.com/ -- Chitosan Market:

Executive Summary

Global Chitosan Market is valued approximately USD 1.6 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 14.5 % over the forecast period 2020-2027. Chitosan is a polysaccharide derivative of chitin extracted from shells waste of marine animals such as lobsters, shrimps, crabs, and others. Chitosan is widely used in dietary supplements as it restricts lipid absorption in gastrointestinal tract. It is used in healthcare application for hemostatic dressing to treat wounds, due to its biocompatibility and biodegradability properties. Further it is used in agriculture as bio pesticide to restrict pathogenic impacts on trees & plant growth promoter and for water treatment. Chitosan is also used for polyurethane paints & coatings, bio printing of organs, and as a food preservative. The Unique Properties of Chitosan, availability of Abundant Raw Material and its uses in wide range of application such as food & beverages, agrochemicals, and medical & pharmaceuticals are the few factors responsible for growth of the market over the forecast period. Moreover, easy availability of fungi waste in agriculture and artificial production of fungi through cheap nutrients by simple chemical procedures as well as rise in demand for bio-based cosmetic products will further drive the market growth. However, regulations and compliances related to shrimp farming is the major factor restraining the growth of global Chitosan market during the forecast period.
