"

> Cyphertop is the most secure encryption software"
> *Ramon Mora*

Cyphertop is computer software that is ideal for communication protection. The software has four functions; Data Encryption - It allows encryption information using Universal Generator of Data Encryption Algorithms, an unique encryption system. Cyphertop also allows the user to hide their file or message in an image (jpg/BMP format) with Steganography software feature. This way, the user can send their secret message without anyone revealing what is inside the image. With the Safe vaults or units feature, anyone can save any type of file with security and peace of mind. Another superior feature of the Cyphertop software app is Share Information. With the Share Information feature, users can share their encrypted files, voice memos, and messages quickly and securely. Cyphertop Encryption Software is available for Android 5.0 and above, as well as Windows 7 or

higher.

Cyphertop Encryption Software is an excellent encryption software option; in terms of encryption time compared to recent algorithms. With fast and secure algorithms, the software is ideal for the banking industry that saves many client databases. Hence, it will give them extra protection against unauthorized access or data theft. As the #1 Encryption Software available on the market, Cyphertop software is also ideal for extra protection to Government files and data. The software can protect any database size and any type of environment.
