Significant rise in surgical procedures, and surge in technological developments in surgical lights drive the growth of the global surgical lights market. On the other hand, high cost of LED lights

restrains the growth to some extent. However, various growth opportunities in emerging economies are expected to create a number of opportunities in the industry.

The cardiac surgery segment to dominate during the estimated period-

Based on application, the cardiac surgery segment accounted for nearly one-fifth of the global surgical lights market revenue in 2018, and is anticipated to maintain the lion's share from 2019 to 2026. In addition, the same segment is expected to grow at the fastest CAGR of 5.3% throughout the forecast period. The increased incidence of cardiovascular disorders and surge in surgical procedures for their treatment have fueled the growth of the segment. The market also analyses segments including gynecological surgery, neurosurgery, and ENT surgery.

The halogen segment to lead the trail till 2026-

Based on type, the halogen segment accounted for more than half of the global surgical lights market share in 2018, and is expected to rule the roost by the end of 2026. This is due to its wide usage in the hospital and ambulatory settings. On the other hand, the LED segment is projected to register the fastest CAGR of 4.6% during 2019–2026.
