Rise in urbanization is expected to result in growth in waste generation. In addition, recycling and reusing help reduce the project cost. Moreover, environmental problems such as soil, water, and air pollution has raised, owing to unplanned C&D waste dumping over the past few years. Environmental awareness has significantly fueled the demand for construction & demolition

waste recycling in developed countries and is incorporating rapidly in developing countries.

During lockdown, owing to COVID-19, the construction & demolition waste generation was hampered. The recycling facilities were also partially or completely closed due to the lockdown. This has affected the recycling of the waste material that was already in the facility and due to very limited construction activities during the lockdown, the waste generated at construction sites is also reduced. However, introduction of vaccines for COVID-19 and reopening of production facilities gradually are anticipated to lead to re-initiation of waste management companies and construction & demolition waste recycling industry at their full-scale capacities.
