OpenChain Project Announces ISO/IEC 5230 Standard
The OpenChain Project (OP) has announced the release of the ISO/IEC 5230 standard, which defines the requirements for OpenChain-compliant software supply chain management (SSCM) systems. This standard is a key milestone in the project's mission to create a global standard for SSCM.

ISO/IEC 5230 is a joint development of the OpenChain Working Group, a consortium of leading technology and automotive companies including Arm, BMW, Carlisle, Bosch, Cisco, Comcast, Facebook, Fujitsu, Google, Hitachi, Microsoft, MOXA, OPPO, Panasonic, Qualcomm, Siemens, Sony, Toshiba, Toyota, Uber, and Western Digital.

The OpenChain Project was established in 2017 to create a global standard for software supply chain management. The project's first major milestone was the release of the OpenChain 1.0 standard in 2018. The project's second major milestone is the release of the ISO/IEC 5230 standard, which is the first international standard for software supply chain management. The standard is based on the OpenChain 1.0 standard and is designed to be compatible with existing OpenChain-compliant systems. The standard is a key milestone in the project's mission to create a global standard for software supply chain management.

OpenChain General Manager Shane Coughlan said, "The release of the ISO/IEC 5230 standard is a significant milestone for the OpenChain Project. It is the first international standard for software supply chain management and is a key milestone in our mission to create a global standard for software supply chain management. The standard is based on the OpenChain 1.0 standard and is designed to be compatible with existing OpenChain-compliant systems. The standard is a key milestone in the project's mission to create a global standard for software supply chain management."
