ENT Devices Global Market Report 2020-30: Covid 19
Impact And Recovery

The global ENT devices market is expected to decline from \$15.3 billion in 2019 to \$12.4 billion in 2020 at a compound annual growth rate (CAGR) of -19%. The decline is mainly because of worldwide supply and demand mismatches of resources due to the COVID-19 outbreak. There is an inadequate production of hearing implants, hearing aid, hearing diagnostic, voice prosthesis, and other ENT-related devices due to the restrictions imposed by governments of various countries to shutdown factories or function with minimal staffing to contain the spread of virus and keep the staff safe. The market is then expected to recover and grow at a CAGR of 6% from 2021 and reach \$19.3 billion in 2023.

The [ENT devices \(or\) equipment market](#) consists of sales of ENT devices and related services by entities (organizations, sole traders and partnerships) that produce ENT devices used in diagnosis and treatment of ear, nose and throat diseases. This industry includes establishments that produce hearing aid devices, hearing diagnostic devices, hearing implants, voice prosthesis devices and other devices.
