Michael North said: "I am very happy to sign these cooperative agreements and honored to work with our associates in Yulin and Shenyang. Their commitments address market concerns about open, efficient access to magnesium, the environmentally-responsible green metal of the future, deployed alongside expert scientific services. This represents another step in our long-term strategy: to join American and Chinese people in making significant and practical contributions to reduce global warming, forging new bonds of understanding, investment and scientific collaboration between our people, in concert with all nations of the world."
