

The reason you must wear a mask after getting Covid-19 vaccination

The vaccine is not immediately immune to the nCoV virus and for how long is unknown.

HO CHI MINH, VIETNAM, January 4, 2021 /EINPresswire.com/ -- Vaccination with the Covid-19

“

The time is right for a better kind of face mask, and Viet Nam is the right country to provide it. Dony Mask has Exclusive Distributors in Saudi Arabia, Australia, Belgium, Malaysia, UAE, New Zealand.”

Henry Pham, CEO of Dony Garment

vaccine will minimize the risk of infection with the nCoV virus. However, according to experts, after injecting, you still need to wear a mask and apply other measures such as hand washing, social distance. Here are the reasons:

Vaccines do not provide immediate immunity

Pfizer Vaccine - BioNTech and Moderna require 2 doses given several weeks apart. Depending on the vaccine, it may take 4-6 weeks from the initial dose to achieve levels of immunity comparable to clinical trials. During this time, the person getting the vaccine may still be infected with the nCoV virus.

The real world is not like a clinical trial

Factors such as how a vaccine is stored, transported, and users can determine the actual effectiveness of a vaccine. Clinical trials evaluated individuals with stable underlying disease.

As the mass immunization campaign takes place, logistics, along with the health of each person, can affect the level of community immunity.

The threshold of community immunity remains a mystery

Community immunity occurs when a sufficient number of people are exposed to the virus, usually through vaccination, and limits the virus's ability to spread. The proportion of the population that need immunizations to achieve public immunity varies with the disease.

With measles, for example, 95% of the population needs a vaccine to limit its spread. According

to the Centers for Disease Control and Prevention (CDC), the community immunity threshold for Covid-19 has yet to be determined.

The immunization period of the vaccine has not been determined

The US Food and Drug Administration requires an average of 2 months of safety and efficacy data after completion of the vaccination regimen for emergency use authorization.

The effective timing of the vaccine is yet to be determined and will be monitored during immunization campaigns.

According to the World Health Organization (WHO), when the Covid-19 pandemic hit the world, with more than 1.5 million deaths, the scientific community has achieved impressive achievements.

In 10 months, the vaccine was created, tested, and deployed with over 90% effectiveness and no serious side effects.

It is imperative that all eligible individuals be immunized. Vaccination significantly reduces the risk of disease but is not yet able to end public health measures.

As we better understand Covid-19 and the effectiveness of the vaccine, we must continue to adhere to measures to reduce exposure to the nCoV virus such as wearing a face mask, washing hands, and social isolation.

In the unpredictable situation of a Coronavirus outbreak, masking has been strengthened as a simple and safe measure of protection. Among the various masks, fabric masks have become a trend because of their reusable (save money), optimum comfort, and protection for the wearer.

DONY Mask: [Face Mask Has a Unique Feature That Makes It Comfortable Enough to Wear All Day](#)

DONY cloth mask's material is assembled with three layers, which possess 3-ply protection

DONY MASK - premium antibacterial cloth face mask (washable, reusable) with CE, FDA, TUV Reach, DGA Certification

properties for better prevention from virus transmission. Specifically, the 3-ply protection includes water-resistant fabric, filter (air and dust) bowl, and 99.9% antibacterial fabric.

All DONY masks follow a strict Ethylene Oxide sterilization process. Thus, their material can penetrate the tiniest pathways to prevent bacteria and viruses from coming in direct contact with your mouth and nose.

Quality certificates

[DONY Mask manufacturing](#) chain is granted with several quality certificates. The two most important documents are the FDA and CE approvals, making it eligible to circulate in the US and European markets.

Its 3-ply protection feature also receives the ISO 9001:2005, TUV REACH, Aseptic Inspection, Intertek, and DGA certificates. These certificates guarantee its quality in producing real water and dust-resistant, antibacterial, and chemical-free cloth masks.

Can You Wear DONY Masks All Day?

Recent research from the Medical Center of Vanderbilt University has proved that wearing cloth masks for a prolonged period won't harm the human body. And there has been no report for any case that suffered from lack of oxide or carbon dioxide toxicity with face covering as a reason.

DONY also have their unique features to ensure both safety and comfort for people putting their masks on.

Superior protective functions

As mentioned, DONY masks own all the necessary certificates to prove their protective functions. And as they are reusable/washable masks, they come with a greater economic value as compared to the single-use medical/surgical masks.

Specifically, DONY masks are capable of the droplet, water, dust, bacteria, and airborne particulate resistance. With its antibacterial properties, DONY cloth masks are recommended for the prevention of virus spread. Especially with people that do not show the symptoms, wearing cloth masks is still a crucial protection method.

Skin-friendliness & Wearing comfort

DONY masks come with UV protection features (UPF 50+) and non-irritating material. Even if you have a sensitive skin type, it should not be a worry. These masks won't cause any allergic symptoms to your complexion, regardless of your wearing time.

Besides the safe-for-skin material, DONY masks are designed with a V Shape Nose Support. The strap is highly flexible, which can extend up to 270% of the original length. Wearing these masks for a long time won't leave any mark on your face, they also won't fog up your glasses.

Ease of use & Eco-friendliness

[You can use and wash DONY cloth masks several times](#). After 30 washing times, its protective

feature remains at around 97%, so as compared to disposable masks, cloth masks are much more eco-friendly.

DONY masks are non-valve masks, wearing them is then straightforward. You won't need to tie any knot or adjust any strap. Instead, simply pull the straps over behind your ears and make sure the masks cover your mouth and nose.

Dony Mask is being distributed on Amazon as: "Dony Unisex 3 Layers Face Mask, Washable and Reusable with Cotton Earloops" and "Dony Unisex 3 Layers Tamarind Fabric Mask, Washable with Cotton Earloops" (with Nose Clip + Adjustable Earloops)
