Management of today's global distribution supply chain is very complex. Depending on the product, the supply chain will involve hundreds of steps, multiple geographic (international) locations, multiple invoices and documents, multiple individuals and organizations involved, and may span months.

With regard to the problems caused by the current supply chain complexity and lack of transparency, the industry is interested in what changes this token will bring about in the logistics industry as a whole.

The WLOG platform is the first application of the WTIA network, linking government projects around the world with real business applications.
