

Safe Free VPN for Daily Browsing

NEW DELHI, INDIA, January 6, 2021 /EINPresswire.com/ -- Surfing the web is everyone's favorite hobby and it became more apparent ever since the global quarantine phase. This hobby is a passive one so people tend to not have an idea that they are doing it for several hours per day. Whenever they see something interesting, they click it; then they will be directed to another site, and on that site, there will be another stuff that the user would want to see- and the cycle goes on.

However, this passive hobby could turn into something life threatening. With third parties roaming around the cyberspace, users' identities and data are exposed and cyberhackers could take advantage of these. Personal information like banking and credit data of internet users are at stake.

This is where a Virtual Private Network or VPN comes to rescue. By connecting to a VPN, the user's IP address is masked and the network will create another IP address based on the user's chosen location server- making it seem like the user is in a different region. By this, the online privacy of the user is protected which makes it harder for third parties especially the cyberthieves to detect the user's location and online activities.

VPN also helps a user gain access to websites that are banned and blocked in his region- the user can enjoy viewing, streaming, and downloading contents that are geoblocked in his area.

Although VPN services have the same major purpose, these VPNs are still different from each other. With all the difference in prices and features, there is a VPN service for every type of user.

For the on-the-budget internet user, or for those people who do not want to invest in a paid VPN, a free VPN may work. A user could also get every benefit of a paid VPN from enabling a free VPN but with no subscription fee. For added security, a user must research well on what free VPN service he should get.

[GoingVPN is one of the most recommended free VPN](#) services in the virtual market right now. It offers unlimited data for users to enjoy browsing anytime of the day. It also has an ultra-high-speed technology to avoid lagging. GoingVPN goes with two bundles: the Basic bundle and the Plus bundle, which is the premium service of GoingVPN. The Plus bundle comes in free too, but with some simple requirements to meet. A user must invite someone to install and register a GoingVPN Plus account. When the invitee does, both of them will have access to the Plus

account which has added location servers and offers max speed for seven (7) days.

As for the internet users who can splurge out some cash, they can enable a paid VPN. Aside from the basic features of a VPN, several paid VPNs offer maximum privacy and security by adding a kill switch feature. A kill switch feature breaks off the internet connection whenever the VPN connection drops. This way, the user's online activities will not, in any way, be visible even for a tiniest second by the cyber third parties.

If a user is not yet certain on how a VPN could be useful, he can try enabling VPN apps that have a free trial version. By this, the user can see the benefits of connecting to a VPN while not being fully committed to using it.

Internet users must be vigilant especially nowadays as everything in cyberspace is vulnerable. By connecting to a VPN, a user is ensuring his privacy and security online.
