/EINPresswire.com/ -- [Disaggregated Routing](#) Market Forecasted to Grow More Than 50% Per Year Over The Next Five Years

Cloud and Telco SP Driving Trend Towards Software-Based Routing and Disaggregation of ASIC, Hardware, Software, and Optics

INCLINE VILLAGE, Nevada, January 12, 2021 - According to a new report published by 650 Group, titled Disaggregated Router Forecast 2020-2025, the worldwide Disaggregated Router market will exceed \$3 Billion in revenue by 2025. The routing market is experiencing a significant shift towards software-based routing, driven initially by architecture changes at cloud hyperscalers, which has driven interest in making the purchase decisions for ASICs, hardware, software, and optics separately.

Routers have been a critical wide area networking technology since the late 1980s. With the advent of the commercial Internet in the mid-1990s, this market saw rapid expansion. About five years after Internet Service Providers adopted router technology, telecom service providers mimicked ISP and began using routing and Internet Protocol architectures as their underlying transport and access systems. As the telecom industry modified its networks, the router market expanded further.

"As Telco SPs become more cloud-like in design and procurement, and as we enter the next wave of product availability, there is a tremendous opportunity for the SP Router Router market to go through its own disaggregation transformation," said [Alan Weckel](#), Technology Analyst at 650 Group. "The development of software-based routing technology that can be sold separately from

The development of software-based routing technology that can be sold separately from routing hardware has spawned the Disaggregated Routing market, causing soaring growth.”

routing hardware has spawned the Disaggregated Routing market, causing soaring growth.”

To purchase the report, we offer this report for \$995 to a single user at a single company and \$1,995 to a group of five users at a single company and have additional options for redistribution and external use of the data. To purchase: <https://650group.com/disaggregated-routing-report.html>

Vendors mentioned in the report include Arista Networks, Broadcom, Cisco Systems, Drivenets, Huawei, Intel, Juniper

Networks, Nokia, and ZTE.

The report also discusses the impact of the changes to component suppliers, end-users, Cloud Providers and is targeted for Telco SP operators, System Vendors, ASIC suppliers, and Cloud Providers.

#### About 650 Group

650 Group is a leading Market Intelligence Research firm for communications, data center, and cloud markets. Our team has decades of research experience, has worked in the technology industry, and is actively involved in standards bodies. 650 Group focuses on leading-edge market trends and research and prides itself on first to market research with numerous research programs focused on Cloud and technology trends.
